**SUBJECT: DISCHARGE OF TREATED GROUNDWATER AT DOUGLAS AIRCRAFT
COMPANY'S FACILITY AT 19503 S. NORMANDIE AVE.,
TORRANCE, CALIFORNIA**

Dear Mr. Lee:

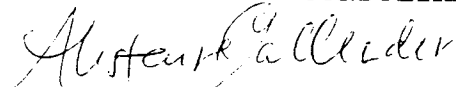

This letter serves as a request to discharge approximately 22,000 gallons of groundwater generated during aquifer testing activities. The water, which contained low levels (<200 ug/l) of volatile organic compounds, was treated using activated carbon. The California Regional Water Quality Control Board, Los Angeles Region has granted permission for the discharge under a "One-Time Discharge" (see attached letter), since treatment of the water has reduced the concentrations of organics to below detectable concentrations.

We propose to discharge the water at a rate of 5 to 10 gallons per minute to a catch basin located on Douglas Aircraft Company's facility at 19503 S. Normandie Ave., Torrance, California. The catch basin is connected to the Dominguez flood control channel via storm drain.

Please call me at (714) 835-6886 with your comments and/or approval.

Very truly yours,
